

Installability	
1	Can the app be installed successfully on the device ?
Device Specific Test Cases	
2	Does the app behave as designed/desired if there is an incoming call?
3	Does the app behave as designed/desired if there is an incoming SMS ?
4	Does the app behave as designed/desired if the device resumes from lock screen?
5	Does the app behave as designed/desired if a local message is coming from another app (think of: calendar reminders, to-do task etc.).
6	Does the app behave as designed/desired if a push message is coming from another app (think of: twitter mentions, whatsapp message, wordfeud invitation, etc).
7	In case there's a true "back" button available on the device does the "back" button take the user to the previous screen?
Network Specific Test Cases	
8	Does the app behave according to specification if connected to the internet through Wi-Fi?
9	Does the app behave according to specification if connected to the internet through cellular data
10	What happens if the app switches between networks (Wi-Fi, 3G, 2G)
11	App name should be self explanatory
12	Does the app limit or clean the amount of cached data.
13	Reloading of data from remote service has been properly designed to prevent performance issues at server-side. (manual reloading of data can reduce the amount of server calls)
App User Interface Test Cases	
14	The main function of the app should be apparent immediately. It should speak for itself.
15	If performance is slow, indicate a progress status icon ("Loading.."), preferably with specific message.
16	Are inactive buttons clearly distinguished from active buttons?
Monefy App Based Functionality Test Cases	
17	validate that search functionality is working properly
18	Validate Transferring money From cash To Payment Card
19	Validate Transferring money From Payment Card to Cash

20	Validate Merging two accounts
21	Expenditure with amount that is more than the available balance
22	Switch between light/dark themes
23	validate changing language
24	validate changing the main currency
25	validate clearing the App data
26	Validate taking backup to the app data
27	validate restoring backed up data
28	validate creating a new account
29	validate setting passcode using password
30	validate setting passcode using fingerprint
31	validate copying purchase ID
32	Verify Exporting the app to a file
33	validate the handy widget
